Re: UHN TGH Nuclear Medicine Symbia Suite Renovation

To whom it may concern,

It is with pleasure and confidence to recommend Gibbs Wilson Contracting Ltd. on their substantial completion of the Toronto General Hospital Nuclear Medicine Symbia Suite Renovation. In my capacity as project planner/manager leading this project for Toronto General Hospital Medical Imaging I had worked closely with Kul Toor, Fred Leduc, and Brad Armstrong.

Their team exemplified excellent support and knowledge in the areas of construction, building solutions and products in conjunction with Siemens medical equipment. The project was well received from the hospital groups as Gibbs Wilson team respected hospital disruptions and policies, and the extensive need for Infection Prevention and Control. I am most pleased with their commitment to project deliverables, building standards, and their professional attention to end users needs.

Without any reservations, I would recommend Gibbs Wilson Contracting Ltd. to any other healthcare institution as they have proved to a valuable asset in completing this project for UHN. I look forward to working with them again in the near future. If I may provide you with any further information in your consideration, please feel free to contact me at the PRISM office.

Sincerely,
